Art Unit: 3749

#### **DETAILED ACTION**

#### **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Specification

The disclosure is objected to because of the following informalities:

On page 7, line 22, change "completely burning-reacted" to –completed burning-reaction--.

On page 40, line 7, change "curve E" to -curve H--,

On page 40, line 12, sentence is incomplete after "stainless".

Appropriate correction is required.

Claims 4 and 15 are objected to because of the following informalities:

The recitation "(at  $0\% O_2$  in the exhaust gas, dry basis)" should go in the preamble.

Appropriate correction is required.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Application/Control Number: 10/618,639

Art Unit: 3749

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

Page 3

Claims 1, 7, 10, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Takubo et al. Takubo et al discloses a water-tube boiler with structure for  $NO_x$  reduction in which  $NO_x$  is reduced by reducing gas temperature such that  $NO_x$  suppression is preferred to reduction of exhaust CO value (SEE column 8, lines 42-51), CO is reduced resulting from  $NO_x$  suppression to not more than a specified value of 800 degrees C. (SEE column 8, lines 55-63).

Claims 1, 2, 4, 5, 8, 10, 11, and 13-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Kayahara et al (5,353,748). Kayahara et al discloses a combustion method and apparatus for suppressing the generation of NO<sub>x</sub> and reducing CO generated by restricting temperature variation to 50 degrees C after which the CO amount is reduced (SEE column 8, lines 57 – column 9, line 3). The NO<sub>x</sub> reduction is performed with an excess air ratio which varies with NO<sub>x</sub> (SEE column 9, lines 15-21) wherein at 0% O<sub>2</sub>, the NO<sub>x</sub> is 9-10 ppm (column 9, line 30). NO<sub>x</sub> reduction is implemented by heat transfer tubes (A3, A4, X4, Y3, Y2, X2, etc) wherein an optional space can be formed by the removal of tubes VX3 and VZ3).

#### Allowable Subject Matter

Claims 3, 6, 9, and 12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/618,639

Art Unit: 3749
